Liquefaction data provided by the Washington State Department of Natural Resources - Division of Geology & Earth Resources. This data is based solely on surficial geology and has been published at a scale of 1:100,000. Data can be accessed through the Washington State Geologic Portal, <https://geologyportal.dnr.wa.gov/>.

A liquefaction susceptibility map provides an estimate of the likelihood that soil will liquefy as a result of earthquake shaking. Mason County depicts the relative susceptibility to liquefaction from bedrock to areas of high susceptibility.
